

18 Facts the Ontario Government Likely Won't Tell You in their 'Vaccine Education Sessions'

On December 11, 2015 the Ontario government announced its intention to introduce Bill 198,²⁷ a legislative amendment to the Immunization of School Pupils Act that would restrict parent's access to legal vaccine exemptions for their children.

Parents who consciously choose not to vaccinate or to vaccinate their children selectively will be forced to attend a mandatory vaccine "education session" before being allowed to exercise a right they already have - their medical right to informed consent and their Canadian Charter rights of freedom of conscience and religion and legal right to security of the person.

Below are 18 facts the Ontario government likely won't tell you in their vaccine education sessions:

Fact #1: The **safety** of the current childhood vaccine schedule has **never** been proven in large, long-term clinical trials.^{1 18} There is increasing evidence the risks of vaccination outweigh the benefits.²³

Fact #2: Vaccines have **not been tested** for carcinogenicity, toxicity, genotoxicity, mutagenicity, or for long-term adverse reactions.

Fact #3: The current vaccine schedule has **never been tested** for safety in the real world way in which the schedule is implemented.³

Fact #4: No independent trials confirm the safety of giving multiple vaccinations at once. Research shows a dose-dependent association between the number of vaccines administered simultaneously and hospitalization or death.²⁴

Fact #5: No long-term clinical evidence exists that show vaccinated children have **better overall health** than unvaccinated children.^{2 4}

Fact #6: There is no independent biological science that shows injecting **mercury** into humans is safe. There is increasing evidence that the use of mercury in vaccines increases the risk of neuro-developmental disorders.^{5 25}

Fact #7: No clinical studies have been conducted to establish the safety of using **aluminum** in vaccines. The neurotoxicity of aluminum is well documented, affecting memory, cognition, psychomotor control, and damage to the blood brain barrier.⁶

Fact #8: The amount of aluminum used in vaccines regularly exceeds the **maximum** amount permitted by the FDA.⁷

Fact #9: Most vaccine safety trials use control groups consisting of other vaccinated populations or “placebos” containing aluminum and other vaccine ingredients. These are not true placebos.⁶ The failure of the medical industry to use a neutral placebo undermines the **integrity** of vaccine safety claims.⁸

Fact #10: The US Vaccine Court has awarded more than \$ 3.3 billion dollars in compensation for vaccine injuries and death since 1988.⁹ This includes families whose children developed **autism** following vaccination.²⁸

Fact #11: Artificially induced immunity via vaccines is **not life long**. Disease outbreaks regularly occur in fully vaccinated populations.^{10 19}

Fact #12: Vaccine safety trials are not conducted by the government. They are conducted by the vaccine manufacturer who has no legal liability for the safety of their product.

Fact #13: Vaccine producers Merck and GlaxoSmithKline have paid **billions** in criminal penalties and settlements for research fraud, faking drug safety studies, failing to report safety problems, bribery, kickbacks, and false advertising.^{17 22}

Fact #14: The disclosures by CDC senior scientist, Dr. William Thompson, reveal the CDC has known for more than a decade that children receiving the MMR vaccine on schedule are significantly more likely to regress into autism compared with children whose parents decided to withhold the vaccine until the child was older.^{11 12 13}

Fact #15: The rate of autism has increased from less than 1 in 10,000 prior to 1980 to more than **1 in 45 children** today.¹⁴ Attention Deficit Hyperactivity Disorder (ADHD) now affects 1 in 10 children.¹⁵

Fact #16: Canada has one of the most aggressive vaccine schedules in the world. The number of recommended vaccines in Canada has more than **doubled** since 1980. Children can receive as many as 49 doses of 14 vaccines by age 6.¹⁶

Fact #17: ALL vaccines in Canada are **voluntary**. Any effort to make vaccinations mandatory contravenes the Canadian Charter of Rights and Freedoms. Mandatory vaccination violates the medical ethic of informed consent, the Nuremberg Code, and the Universal Declaration of Bioethics and Human Rights.

Fact #18: Canada is the only G7 nation without a national no-fault vaccine injury compensation program.^{20 21} Provincial (except Quebec) and Federal governments have **no duty of care** if you are injured by a vaccine.²⁶ **You are on your own.**

By Ted Kuntz

Ted Kuntz is the parent of a vaccine-injured child. Kuntz has dedicated more than 30 years to researching the vaccine literature and is an advocate for preserving our right to informed consent. Kuntz is a member of the Board of Directors of **Vaccine Choice Canada**.
