

# Top 12 Things You Should Know About COVID-19 Vaccines

## 1 COVID VACCINES DO NOT PREVENT INFECTION OR TRANSMISSION

COVID-19 vaccines do not prevent infection or transmission. Their purported benefit is they reduce symptoms. This means the vaccines are treatments and not vaccines.

## 2 COVID VACCINES UTILIZE mRNA TECHNOLOGY

COVID "vaccines" utilize untested mRNA technology whose long-term impact on the human body is unknown. There are no long-term studies that demonstrate the impact of injecting this genetic technology into humans.

## 3 COVID VACCINES WERE ADMINISTERED WHILE STILL EXPERIMENTAL

COVID vaccines were authorized and administered for use while the product was classified as 'experimental'. How many Canadians understood that they were subjects in Phase III human trials?

## 4 SERIOUS ADVERSE REACTIONS ARE REAL AND UNDERREPORTED

The US Vaccine Adverse Events Reporting System (VAERS) reports 1.2M adverse events (AE) following COVID shots including 26,693 deaths as of April 1, 2022. Less than 1% of adverse reactions are reported to VAERS. Pfizer's recently released clinical data reported 1,291 different adverse reactions, that 15,000 study subjects suffered serious neurological disorders, and they planned to hire an additional 1800 staff to field incoming calls of injuries. They knew.

## 5 LACK OF INFORMED CONSENT

Data reveals that these shots have only short-term efficacy, that the spike proteins produced with mRNA vaccines can damage organs and cells, and that the injections do not prevent infection. In spite of the abundance of medical and scientific evidence of risk, governments continue to claim the injections are 'safe and effective'.

## 6 VACCINE MAKERS ARE IMMUNE FROM LIABILITY

The Canadian government granted COVID vaccine manufacturers legal immunity for any injury or death caused by their products. This means COVID vaccine manufacturers cannot be sued when their vaccines cause death or injury. There is no legal or financial accountability to ensure that vaccine manufacturers make the safest vaccines possible.

# Things You Should Know About COVID-19 Vaccines

## 7 VACCINE MANUFACTURERS HAVE A HISTORY OF FRAUD

Vaccine makers have paid out tens of billions of dollars for crimes, including fraud and violating the US False Claims Act, when they knew products would cause injuries and death.

(Think Vioxx, Opioids and more.) If they knowingly put harmful products on the market when they can be sued, why should we trust them to make safe vaccines when they have no liability and rushed clinical trials?

## 8 COVID HAS A HIGH SURVIVAL RATE

According to the CDC, the overall survival rate for COVID is 99.74%. For people aged 18-29, the survival rate is 99.97. The vast majority of COVID deaths involved co-morbidities. No risk/benefit analysis supports the COVID injections.

## 9 PREVENTION AND EARLY TREATMENTS EXIST

Proven protocols for the prevention and early treatment of COVID exist but continue to be withheld from Canadians, treatments that are being used successfully in other countries. Making safe and effective treatments available would increase the survival rates even more.

## 10 CENSORSHIP OF FRONTLINE HEALTH PROFESSIONALS

Doctors, nurses, and other frontline health care professionals continue to be silenced, censored, and decertified for sharing their clinical experience and exercising their professional judgment via a vis vaccines and treatments.

## 11 GOVERNMENT USING COERCION

Governments in Canada continue to use coercion and propaganda to impose COVID vaccination thereby violating the legal and medical ethic of informed consent and denying Canadians the right to make their own medical decisions.

## 12 GOVERNMENT UNDERMINES PARENTAL AUTHORITY

Current government policies that permit child vaccination without parental knowledge or consent undermine a parent's authority and their right and responsibility to make medical decisions for their children.
