

4. Where Can I Get More Information?

Below is an example of some of the books and online resources to assist you in becoming better informed on vaccine issues.

Books

Vaccines – A Reappraisal - Richard Moskowitz, MD

A truly wonderful book on why the vaccine process, by its very nature, imposes substantial risks of disease, injury and death that have been persistently denied by the vaccine industry, vaccine policy makers, and the medical profession. It is without a doubt, the most important book on this topic that has been published in many years. Dr. Moskowitz draws on 50 years of general medical practice caring for children and adults.

Vaccine Safety Manual - Neil Z. Miller

This bestselling guide to common childhood illnesses and vaccines evaluates each vaccine for safety, efficacy, and long-term effects. Impeccably researched and referenced, it contains the most comprehensive, up-to-date, uncensored data available – information that many doctors don't even know. In addition, health alternatives are offered, along with legal options to mandatory shots.

Dissolving Illusions - Suzanne Humphries, MD, and Roman Bystryanik

Dissolving Illusions details facts and figures from long-overlooked medical journals, books, newspapers, and other sources. Using myth-shattering graphs, this book shows that vaccines, antibiotics, and other medical interventions are not responsible for the increase in lifespan and the decline in mortality from infectious diseases. A 10th Anniversary Edition was published in 2024.

“

"Immunization is a complicated topic that needs more reflection and less coercion. It's time to realize that vaccines, like medicines, are not a mystic panacea and that they are subject to the commercial and political pressure and also to the influence of conflicts of interest."
