

Do  
children  
need a  
COVID  
vaccine?

Do you have all the information  
to make an informed decision?

## Did you know:

- COVID vaccines are not classically-defined 'vaccines.'
- All COVID vaccines are considered **experimental**.
- Childhood **risk** of COVID-19 is **effectively zero**.
- COVID injections **do not prevent** infection or transmission.
- Natural immunity is **stronger and longer lasting** than injected immunity.
- COVID vaccines have significant risk including strokes, seizures, paralysis, heart disease (myocarditis), and possibly sterility and infertility.

*This may be the most important decision  
you will ever make.*

**Choose wisely.**
