To the Attention of:
Justin Trudeau, Prime Minister of Canada
House of Commons Ottawa, Ontario Canada K1A 0A6

February 17, 2016

Dear Prime Minister Trudeau

Congratulations to you and the Liberal party on your success. We are delighted with this government's commitment to providing a kinder and gentler world, to innovation, and to undoing some of the anti-science efforts of the previous government.

We are writing in response to your stated "willingness to listen" and an expectation that the work of the Canadian government "will be informed by performance measurement, evidence, and feedback from Canadians" as outlined in your recent Mandate Letter to Dr. Philpott, Minister of Health.

The Minister of Health Mandate Letter also expresses your intention to promote health by "increasing vaccination rates". While we appreciate your commitment to promoting health, we respectfully suggest that more information is needed to ascertain whether we can achieve this goal through the paradigm of artificial immunization.

In spite of the assurances of the medical/pharmaceutical establishment that all vaccines are safe, there has never been an independent assessment of the risks and benefits to public health of ever increasing vaccination rates.

Vaccine Choice Canada is a membership of parents and concerned citizens, many of whom have experienced first hand the injury or death of a loved one from a vaccine. Through our lens at Vaccine Choice Canada we see a increasing decline in the health of Canadian children. This decline parallels the number of vaccines that have been added to the infant/young child schedule since the mid 1980's. While vaccination may not be the only environmental factor associated with this decline in children's health, recent scientific research shows it to be contributory at the very least.

The amount of chronic childhood illness is increasing at a dramatic rate. According to the previous Prime Minister of Canada, in 2008 1 in 10 children had life threatening afflictions. In the last 25 years there have been huge increases in the following childhood illnesses: ADD, ADHD, allergies, asthma, autism, juvenile diabetes, learning disabilities, obesity and severe mood dysregulation.

At the same time Canadian children are among the most vaccinated children in the developed world. Since 1980 Canadian vaccine schedules have more than doubled the types of vaccines given. By the time a child is six years old he or she receives approximately 49 doses of vaccines in an attempt to artificially boost immunity.

What role does vaccination play in the substantial increase in chronic illness in our children? Without properly designed clinical trials that compare a vaccinated population with a never vaccinated population we may never know the answer.

What can we do to bring this grim reality to the forefront—to help lift the veil of denial protecting the vaccination paradigm at the expense of human health? The answer is as you've listed in your Minister of Health Mandate Letter: performance measurement, evidence, and feedback from Canadians.

As the number of vaccines grows exponentially (over 271 under development), there is increasing pressure to eliminate a patient's right to informed consent and a citizen's rights and freedoms guaranteed under the Canadian Charter of Rights and Freedoms. As parents and citizens we are deeply concerned by the efforts of the medical industry to undermine the medical ethic of informed consent for an invasive medical intervention with known side effects including death or life-long neurological and immunological injury.

Many of us at VCC have spent a lifetime educating ourselves about vaccines and vaccine injury. We are aware that vaccines are not as safe and effective as they are purported to be. Unfortunately evidence-based decision-making is rare in the highly politicized vaccine discussion. It is common for anyone expressing concern about vaccine safety, whether doctors, researchers, or patients, to be immediately marginalized and silenced.

Witness the complete absence of government and media attention given to the recent disclosures of Dr. William Thompson, a senior scientist with the U.S. Centre for Disease Control. Dr. Thompson has taken whistleblower status and revealed that the CDC has been fraudulently manipulating data for more than ten years to deny the vaccine-autism connection.

There is a different standard if a child becomes ill from a vaccine versus another cause. If a child develops a serious illness from a tainted food product government takes immediate action. Food processing facilities are closed, products are recalled, health inspectors test products and equipment, media makes public announcements warning of the tainted products, medical treatments are offered, and financial compensation is expected.

Compare this response to the response when a child is seriously injured or dies from a vaccine. No government inspectors are called. No vaccine manufacturing is suspended. No products are identified and recalled. No public announcements are made to warn the public. No medical treatment is offered to address the vaccine injury. No financial compensation is provided. Instead there is silence or denial.

There is callous disregard of Canadians injured by vaccines. There is greater investment in protecting the vaccine industry than in protecting our children. This quote evinces that attitude:

*"Any possible doubts, whether or not well founded,
about the safety of the vaccine cannot be allowed to exist".*

~ Federal Register. Vol. 49, No. 107

June 1, 1984

The medical establishment considers vaccines effective if they suppress a few targeted illnesses—but at what expense? An emerging body of evidence indicates that artificial immunization can and does damage a child's developing immune system and brain, leading to life-threatening and debilitating disorders. Judy Converse, who holds a Master's Degree in Public Health, is a Licensed and Registered Dietitian states:

*'For the first time in history...children are sicker than the generation before them.
They're not just a little worse off, they are precipitously worse off,
physically, emotionally, educationally and developmentally.'*

~ Judy Converse, MPH, RD, LD in *Why Do Pediatricians Deny the Obvious?*

Prime Minister, you may not be aware of the following:

1. The safety of the current childhood vaccine schedule has never been proven in large, long-term clinical trials. Most safety trials are limited to a few weeks.
2. Most efficacy trials are limited to the measurement of anti-bodies/titers in the blood, rather than producing verifiable evidence that the vaccine actually prevented the targeted disease.
3. The current vaccine schedule has never been tested for safety in the real world way in which the schedule is implemented. Vaccines are approved and licensed individually, yet Health Canada recommends and

doctors routinely give multiple vaccines at the same time. No safety trials exist that confirm the safety of giving multiple vaccinations together.

4. No large safety trials have been undertaken that use an unvaccinated population as the control group and demonstrate that the total health outcomes of a vaccinated population is greater than a never vaccinated population.
5. Vaccines have been given the credit for the decline in mortality from major infectious diseases. Historical epidemiological data, however, shows that major declines in disease mortality took place before the introduction and common use of specific vaccines.
6. There is a major epidemic amongst our children today. The epidemic is comprised of neurological and immune system disorders such as Attention Deficit Disorders and Attention Deficit Hyperactivity Disorders, Autism Spectrum Disorders, learning disabilities, life threatening allergies, juvenile diabetes, and autoimmune diseases like arthritis and Parkinson's, as well as Autoimmune Inflammatory Syndrome Induced by Adjuvants (ASIA).

As Canada's Prime Minister we request your assistance and support of the following:

1. Respect and protect the medical ethic of informed consent.
2. Demand verifiable evidence of the long-term safety of the current vaccine schedule by comparing the total health outcomes of a vaccinated population with a never vaccinated population.
3. Institute an accessible and transparent vaccine injury compensation plan for all Canadians injured by vaccines. A plan that places liability on the manufacturers of vaccines.
4. Allow full public access to vaccine injury data.
5. Make the reporting of vaccine injury a legal requirement.
6. Provide government funding for independent research on vaccine safety.
7. Require mandatory training of Physicians to diagnose and treat vaccine injury.

As a final note, the medical industry and the media continue to inappropriately label our efforts as "anti-vaccine". The fact is our children would never have been vaccine injured if we were "anti-vaccine". We consider our efforts pro-safety, pro-choice, pro-science and pro-honesty and transparency.

We would appreciate the opportunity to meet with you and your senior staff at your earliest convenience. We believe the health and safety of our children is of utmost concern and wish to assist the government in developing strategies and practices to ensure the health and well being of all Canadian citizens.

Sincerely,

The Board of Directors of Vaccine Choice Canada
