

Vaccine Action Ideas

1. Arrange to meet with your MLA in person. Bring a friend to support you.
2. Copy and sign the letter to the Premier, Health Minister and MLAs. Give the letter to your MLA. Have a copy for yourself and refer to the letter as you speak to your MLA.
3. Invite your MLA into a discussion about your shared goal to have healthy children.
4. Ask your MLA some of the questions listed below.
5. Before leaving, ask your MLA if you can count on them to support your right to informed consent, parental rights, and therapeutic choice.
6. Get a copy of a vaccine insert and ask your MLA if he/she has read it.
7. Leave copies of the other documents with him/her.
8. Say you will follow up in a week after they have had a chance to read the materials to see if they have any questions.

Questions to Ask Your MLA?

1. What do you hope vaccine mandates will accomplish?
2. What is the medical emergency that necessitates the loss of individual and parental rights?
3. How is a dozen cases of measles a medical emergency?
4. How many measles related deaths have there been in Canada in the last 10 years?
Answer: 3 deaths, 1 adolescent (age 15-19 years) and 2 adults, 2007-2016. Significantly, NO child less than 15 years old, nor infants or young children have died from measles.
5. How many children have been killed or injured by measles containing vaccines in Canada? Answer: As reported in the Canada Vigilance database, there were 9 deaths following measles containing vaccines, 1965-2015, and 237 severe adverse events following measles containing vaccines, 1970-2011. Canada Vigilance records can be found here: <https://vaccinechoicecanada.com/wp-content/uploads/vcc-mmr-deaths-9-1965-2015.pdf> and here: <https://vaccinechoicecanada.com/wp-content/uploads/vcc-mmr-237-sae-age-1-7.pdf> Furthermore a large Canadian study found that 1 in 168 children end up in ER following their 12 month shots which includes MMR and other vaccines: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3236196/>
6. Have you ever read a vaccine insert?
7. If the justification is measles contagion, why are other vaccines being tracked or forced on families?
8. Why is autism not considered an epidemic when it is more than 1 in 50 children in BC?
9. Is BC intending to implement a vaccine injury compensation plan?
10. What screening is being planned to identify those with mitochondrial disorders who would be harmed by vaccines?
11. Who will be held accountable for vaccine injuries and deaths?
12. Will you support our right to informed consent and parental rights?

Key Messages

1. No childhood vaccines tested for safety using **an inert placebo**.

2. No evidence vaccines **produce better overall health**.
3. **No medically justified reason** to impose vaccine mandates.
4. **No evidence eradication can be achieved** with vaccines.
5. Most vaccines are **not designed to prevent transmission**.
6. **Live viral vaccines shed** up to six weeks post vaccination (why are recently vaccinated children not suspended from school until they stop shedding?).
7. No evidence that injecting pregnant women **is safe**.
8. Vaccines **are liability free products**. No incentive for vaccine manufacturers to make better or safer vaccines.
9. Claims of vaccine industry **are exaggerated**.
10. Vaccine-autism link has not been debunked. It's been **suppressed**.
11. Systems to provide oversight and safeguards have been **captured or eliminated**.
12. No independent oversight. No legal oversight. No media oversight.
13. **Financial conflicts of interest** is the norm.
14. The International Bill of Human Rights **protects the right** of informed consent.
15. **Less than 1%** of vaccine injuries are reported.
16. Canada is the only G7 Nation without a national **vaccine injury compensation** plan.
17. The safety of injected mercury and aluminum has **never been established**. Both were grandfathered in.
18. All vaccines should be carefully evaluated, both individually and in long-term studies, and then, **synergistically**, for toxicity with other vaccine combinations.

Strategy

1. Defining the terms of a debate is halfway to winning it – use the language of ‘pro-vaccine choice’, parental choice, freedom of choice, freedom of speech
2. Be precise, passionate, and assertive.
3. Demand that our rights and freedoms be respected.
4. Do not accept compromises. There is no compromise to freedom.
5. Awareness brings responsibility. We have a responsibility to warn others of vaccine injury.

Potential Allies:

1. BC nurses
2. BC teachers (teachers will be next)
3. Any adult. Adult mandates will be next
