

BC Mandatory Vaccine Registry

Without public consultation, BC Health Minister Adrian Dix has launched a coercive mandatory immunization registry which violates medical privacy and results in segregation of school children. Vaccine hesitant parents will be required to attend a mandatory 'vaccine education' class with their child. Hefty penalties are threatened for non-compliance.

Minister Dix aims for 95% compliance to liability-free vaccines, even though no vaccines on the childhood vaccination schedule have undergone safety testing against a neutral placebo. Many contain neurotoxic aluminum adjuvants and mercury in multidose flu shots.

ALUMINUM & MERCURY IN BC VACCINES

- Maximum allowable aluminum for intravenous feeding - **4.5 mcg** per Kg of body weight per day
- Or **18.18 mcg** per day for an 8 pound baby
- At the 2 month check-up, baby is injected with 8 vaccines containing **1,945 mcg** of aluminum adjuvant
- A two year old fully vaccinated child has received up to **6335 mcg** of aluminum, depending on vaccine brand used at 18 months.
- Number of studies proving safety of injecting aluminum into human infants. **ZERO**

ALUMINUM AND MERCURY ARE POTENT NEUROTOXINS LINKED TO BRAIN INJURY

- **1 ppb** "maximum accepted" limit of mercury in drinking water in Canada
- **200 ppb** in liquid waste considered toxic by EPA
- **50,000 ppb** mercury (25 mcg/0.5mL) injected into pregnant women (multidose flu shot vials)
- **25,000 ppb** mercury (12.5 mcg/0.25mL) injected into babies at 6 months & 7 months (multidose flu shot vials)

There are no known safe levels of mercury injected into humans

Minister Dix claims that vaccines are safe and that parents are misinformed. He recommends that minors make their own vaccine decisions, bypassing parental knowledge and consent. Misinformed politicians and unelected Public Health officials are unethical in their demands that private medical information be reported and in implying that children **MUST** be vaccinated for school attendance.

Don't let Dix playing doctor without a license dictate your personal, informed medical choices.
