

Dear BC School Superintendents, Trustees, Principals and Teachers

We are writing to you today to bring to your attention issues that are causing grave concern to the families in British Columbia's education system. We wish to ensure that you recognize the significance of these issues and their potential impact on our rights and freedoms as citizens of British Columbia.

On July 1, 2019 the BC government implemented, without any public or legislative debate, **Regulation 376** mandating the reporting of vaccination status for school attendance.¹ Of significant concern are the requirements of Regulation 376 which are to take effect in September 2020. Parents who choose not to vaccinate, to vaccinate selectively, or on a delayed schedule will be *forced* to attend, ***together with their child***, an information session and a meeting with a medical health officer. The regulations include the threat of **fin**es and **imprisonment** for non-compliance.

Do you recognize the significance of these regulations?

While mandating the reporting of vaccine status may seem innocuous and innocent, this violation of medical privacy is simply the first step in the erosion of our rights and freedoms. If the British Columbia government follows the pattern of other governments, both in Canada and internationally, this egregious over-step by the state inevitably leads to all available vaccines being mandated and the elimination of personal and religious rights and freedoms. This medical tyranny is being witnessed globally.

How is it that children who carry active infections (HIV/Hepatitis B) have their right to medical privacy respected and protected, yet the rights of healthy children with no active infection are being violated? The fact is Regulation 376 supports policies which violate the right of informed consent, eliminates the right of parents to make medical decisions for their children, violates medical privacy, and denies bodily sovereignty and personal autonomy.

Why this movement toward medical tyranny is of particular concern to school superintendents, trustees, principals and teachers is because in each case governments use the threat of **denying children a public education** as the means to coerce families to accept an invasive medical technology that carries the risk of permanent injury and death.

¹http://www.bclaws.ca/civix/document/id/oic/oic_cur/0376_2019

The injection of complex biochemical drugs is a private matter between the parents and their physician and should never be imposed on children in the school setting. The very real consequence is that a parent must either comply with the “recommended” medical procedure and act against their wishes and considered wisdom, or be denied a public education for their children, a right guaranteed under the Canadian Charter of Rights and Freedoms.

Our children should never be denied their right to a public education.

The reality is that **this is not a medical issue**. This is a human rights issue. This is conceivably the most important human rights issue in the history of mankind. The impact of these human rights violations have the potential to affect **every human on the planet**. The vaccine industry is actively committed to removing our right to say ‘no’ to unwanted medical interventions that carry the risk of permanent injury and death. This, by an industry that carries no legal or financial liability for the harm, injury and death caused by their products.

If the risk is really about measles, the BC government would be developing health policies focused on measles and measles alone. Instead, what we are seeing is a **broad attack on the basic human** right of free, prior and informed consent. The BC government is using the manufactured fear of measles to force parents to accept the entire, liability-free vaccine program, not just measles vaccines. Measles outbreaks are the Trojan Horse that the medical industry is using to sell a bloated vaccination schedule - an uncontrolled experiment performed on entire generations of children.

Included in this document is an overview of information pertinent to this issue and links to allow you a deeper investigation. It is our hope and expectation that you will familiarize yourself with these issues and their very real implications and become **a strong advocate and protector** of our rights and freedoms so that **all** children can enjoy a public education in BC.

Vaccine Choice Canada is a community of families who have personally experienced vaccine injury, including permanent disability and death. Our experiences have awakened us to the real threats we face as a society. We are aware that if we do nothing, our rights, freedoms and sovereignty will most certainly be lost.

Thank you for your careful consideration of this information. We are available to discuss any of this with you at your convenience. Feel free to contact VCC with your questions.

Sincerely,

Vaccine Choice Canada

*“Unless we change our direction,
We will end up where we are headed.”*

Where there is risk, there must be choice.

There Is No Medical Crisis

The for-profit medical industry would have us believe that vaccine mandates and the infringement of our Charter rights and freedoms are necessary based on a medical crisis. **There is no medical crisis** in Canada that justifies the loss of our precious rights and freedoms.

The argument being presented is that we are experiencing a “measles epidemic” because of “vaccine hesitant parents.” Nothing could be further from the truth. The fact is that 111 cases of measles in 2019 in a population of 37 million, with no permanent injury or death is not a medical crisis. Quite simply, based upon the level of risk to Canadians experiencing measles, there is no medical justification to impose more than **70 doses of 17 different vaccines** by age 18.

Current medical research confirms that the recent measles outbreaks are a result of vaccine failure and not a failure to vaccinate.² The “measles epidemic” is a *manufactured crisis* that is being used to scare and coerce Canadians into indiscriminate vaccination and to marginalize those who question vaccine ideology, safety, effectiveness and necessity.

Our goal is to awaken legislators, school superintendents, trustees, principals and teachers before these human rights violations become normalized and entrenched. In our effort to bring awareness to these systemic violations of our rights and freedoms, **Vaccine Choice Canada** launched a legal challenge against the Ontario government on October 24, 2019.

The Ontario government has been violating rights and freedoms through the use of vaccine mandates for 37 years. The recent addition of mandatory vaccine education sessions and compelled speech affidavits are additional Constitutional violations. Families across Canada have decided that enough is enough. It is time to take action and stand up for our rights and freedoms.

- **Statement of Claim:** A description of our legal action and a copy of the Statement of Claim for our legal challenge can be found at:
<https://vaccinechoicecanada.com/exemptions/news-release-vaccine-choice-canada-october-28-2019/>

We have also obtained a legal opinion from a Canadian Constitutional Law Specialist on the new Regulations in BC. He states:

*“The new Regulations, in concert and through ss.107 and 108 of the Public Health Act, impose draconian measures, as well as monetary fines of up to \$200,000.00 and up to six (6) months in jail, and **flagrantly violate:***

(a) a person’s freedom of conscience and belief contrary to s.2 of the Charter;

² <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3905323/>

(b) a person's freedom and security of the person to their physical and psychological integrity, over the control and decisions over their own body, contrary to s. 7 of the Charter, with a law that is "overly broad", which is contrary to the tenets of fundamental justice under s.7 of the Charter, in not allowing for any personal or individual exemptions;

(c) violates the right to equal treatment under the law, contrary to s.15 of the Charter, in that the Regulations and Act do not apply to Indigenous persons, which clearly vitiates the validity and valid objective of the law with respect to its purported purpose."

- **Legal Opinion – Regulation 376:** This legal opinion of Regulation 376 can be reviewed at:
<https://vaccinechoiccanada.com/exemptions/british-columbia-an-assessment-of-new-mandatory-reporting-regulations/>

Vaccine Choice Canada has produced a 20 page document entitled: '**Consent or Coercion**', which clearly outlines our concerns with coerced vaccination. A copy was recently delivered to every member of the Legislative Assemblies of British Columbia, Ontario and New Brunswick.

Politicians who have read the document acknowledge that they were unaware of the considerable information we provided about vaccine safety, effectiveness and the associated decline in the health of children in BC. We encourage every school official to review this document and familiarize themselves with our concerns.

- **Consent or Coercion:** A copy of Consent or Coercion can be found at:
<https://vaccinechoiccanada.com/wp-content/uploads/vcc-members-bc-legislature-consent-or-coercion-2019.pdf>

A Global Agenda

The fact is the pharmaceutical industry has a global agenda to impose their vaccine ideology on every man, woman and child world-wide. What is happening in Canada is occurring in every major country in the world. This was verified at the recent **International Conference on Informed Consent** held in Israel on November 21, 2019.³

Children are the initial target of this ideology. However, the declared intention of the **World Health Organization** is to impose a rigorous vaccination schedule on every person on the planet. Eventually employment, travel, government benefits, a driver's licence, even medical treatment may all be dependent upon conforming to a corporate imposed vaccination schedule. This is already happening in Argentina and elsewhere.

These violations and subjugation are occurring without any substantive public debate or scientifically verified evidence of safety, effectiveness or necessity.

³<https://expotelaviv.co.il/en/event/international-conference-on-informed-consent/>

Concerned families who have experienced vaccine injury of a loved one and are demanding independent, scientifically verified evidence of safety, effectiveness and necessity are routinely demeaned, dismissed, marginalized, oppressed and pejoratively labeled as ‘anti-vaxxers’ and worse. Even more disconcerting is that this oppression is now occurring in our schools.

School Officials are Complicit in this Oppression

We have no doubt that most of those involved in BC’s education system are well intended and honestly believe that they are doing the “right thing” by encouraging/coercing students to vaccinate. Unfortunately, most have accepted the promise that vaccines are universally “*safe and effective*” without any real investigation of the evidence. They assume that someone has done the necessary scrutiny of these claims. These claims, which have never been scientifically verified with long-term, placebo controlled clinical testing, come at a huge cost – the loss of individual rights, liberty and sovereignty, and the loss of the health and education of our children.

The Science Is Not Settled

The fact is we don’t know the safety of the current vaccination program because **the science has not been done** to the level that would support this conclusion. This is not our opinion but rather the finding of the **Institute of Medicine** which determined that the safety of the current childhood vaccine schedule **has never been proven** in large, long-term clinical trials.⁴ They state:

“Few studies have attempted more global assessment of entire sequences of immunizations or variations in the overall immunization schedule and categories of health outcomes, and . . . none has compared entirely unimmunized populations with those fully immunized for the health outcomes of concern to stakeholders.”

In 2011 the Institute of Medicine reviewed 155 health conditions associated with the *Varicella, Tetanus, Hepatitis B* and *MMR* vaccines. In only 5 cases did the scientific evidence reject causation. In 134 cases the IOM deemed that there were **too few scientifically sound studies** published in the medical literature to determine whether more than 100 serious brain and immune system problems *are or are not caused by the vaccines*, including multiple sclerosis, arthritis, lupus, stroke, SIDS, autism and asthma.⁵

The Real Epidemic

School superintendents, trustees, principals and teachers ought to be more aware than most of the real epidemic facing our children today. The reality is that there is an epidemic of children experiencing *ADHD, autism, learning disabilities, anxiety disorders, mental illness, cancer,*

⁴<https://www.ncbi.nlm.nih.gov/books/NBK206940/>

⁵<https://www.nvic.org/PDFs/IOM/2013researchgaps-IOMchildhoodimmunizationschedulea.aspx>

asthma, life threatening allergies and other neurological and immunological disorders which were unheard of in children just a few generations ago.

Our children deserve better.

There is irrefutable scientific evidence that vaccine ingredients such as the **aluminum adjuvant**, which is present in many vaccines, is linked to long-term brain inflammation that can cause life-long brain injury, mental illnesses, seizures/epilepsy, learning and memory impairment, ADHD, social and speech impairment, compulsive behaviours and schizophrenia. Continuous and repeated immune system provocation which results in chronic inflammation in the formative years of life can seriously disrupt the normal course of brain development.⁶

One only needs to witness the dramatic increase in the demand for special education and mental health services in schools to see the real crisis that we face. Teachers are faced with increasingly disruptive and violent behavior in young students. More and more schools are challenged with children who are “unteachable.” This results in increased use of “quiet rooms” and suspensions - ineffectual and desperate attempts to deal with chaotic classrooms and the epidemic numbers of children with an impaired capacity to learn.

In the last 25 years we have witnessed huge increases in the following childhood conditions:

- **Autism** - increased more than one thousand-fold in less than a generation; autism spectrum disorders now affects more than 1 in 66 children and 1 in 42 boys in Canada.
- **Impact on Development** - Over 27% of Canadian children fall short on at least one measure of physical, emotional or cognitive development by age 5.
- **Attention Deficit Hyperactivity Disorder** - 1 in 10 children
- **Learning Disability** - 1 in 6 children affected
- **Severe Mood Dysregulation** - 1 in 30 children affected
- **Allergies** - increased 6X since 1980
- **Anaphylactic Food Allergies** - doubled in the last decade
- **Eczema** - 1 in 5 children affected
- **Asthma** - 1 in 8 children affected
- **Obesity** - tripled since 1980; 25% of Canadian children overweight/obese
- **Juvenile Diabetes** - more than 100% increase since 1980
- **Childhood Cancer** - dramatic increase

The declining health of our children was confirmed in the ‘**Raising Canada**’ report issued by the O’Brien Institute for Public Health in 2018.⁷ They state that today’s children are **significantly less healthy** than previous generations. At the same time Canadian children are among the most vaccinated children in the world. Since 1980 the Canadian vaccine schedule has more than

⁶<http://vaccinepapers.org>

⁷<https://obrieniph.ucalgary.ca/files/iph/raising-canada-report.pdf>

tripled the number of vaccines given. Children in BC who follow the recommended vaccination schedule can receive as many as **71 vaccine doses** by age 18.

Nowhere in this growing epidemic are questions being asked and answers being demanded. Instead we have increasing efforts at coerced consent obtained by intimidation, which is no consent at all, and the silencing of any question, debate or criticism.

How You Can Help

1. Refuse to Support Coercion

School superintendents, trustees, principals and teachers are in a unique position to assist with ending this medical tyranny and stopping the growth of an authoritarian state. This is because the blunt instrument being used to enforce this coercion is the threat of denying children a public education. Should schools refuse to participate in this violation of our rights and freedoms, the medical cartel would lose one of their most powerful tools of coercion.

The fact is all children are guaranteed the right to a public education in the Canadian Charter of Rights and Freedoms. **We are simply requesting that you enforce our Charter right to a public education for our children.**

2. End the Marketing of Vaccine Products in BC Schools

The second way to assist in ending this medical tyranny is to eliminate the use of educational materials in schools that are intentionally designed to promote the sale of pharmaceutical products. These include:

- **I Boost Immunity** (Act Locally. Immunize Globally) ⁸, sponsored by London Drugs and Pharmasave
- **Kids Boost Immunity** ⁹
- **Teacher's Kit: Integrating Immunization Education into the Grade 6 Curriculum** ¹⁰

Pharmaceutical industry information about vaccines has become an integral part of children's experience in the school setting. As a result, our children are being coerced to participate in vaccination as part of their learning curriculum. This needs to stop.

It is a violation of BC education standards to subject children in the school setting to marketing campaigns for any industry's products.

⁸<https://iboostimmunity.com>

⁹<https://kidsboostimmunity.com>

¹⁰https://immunize.ca/sites/default/files/Resource%20and%20Product%20Uploads%20%28PDFs%29/Campaigns/Poster%20Contest/2018/teachers_kit_2018_e.pdf

Schools are meant for learning reliable and factually supported information - not places where children are targeted with advertisements of any kind, and especially not those which offer an incomplete and inaccurate representation of a product. The reality is that no information is being provided to students about the risk of vaccine injury and death and their legal and ethical right to informed consent, which also means the right to refuse vaccines.

We ask that you to take a strong stand and terminate this unethical marketing of pharmaceutical products within BC's school system.

3. End Vaccination Clinics in the School Setting

The third way to assist in ending this medical tyranny is to refuse to permit vaccination clinics in school settings. The reality is that the **Mature Minor Doctrine** is being aggressively utilized to coerce students as young as ten years of age to partake in the complex medical practice of vaccination in school settings without the knowledge or consent of the parents.

The BC government has been very explicit in their agenda to vaccinate our **children with or without the consent of parents**. In a recent document provided they state: ¹¹

“Children whose parent / guardian has indicated that their child will not be immunized will be re-offered vaccine at future encounters, including, as a minimum:

- *When the child turns 10 years of age*
- *When the child turns 13 years of age*

After the age of 13, children may be asked to consent to immunization on their own behalf, regardless of previous parent / guardian refusal.”

Vaccination clinics in schools are an intentional and unethical means to violate a parent's right to make medical decisions for their children.

Further, it is reported that parents are no longer being informed about scheduled vaccination clinics held in BC schools. This removes the right of parents to keep their children at home on vaccination clinic days. This is seen by many as an intentional effort to undermine parental consent, increase pharmaceutical product sales and vaccination compliance rates. These actions are making our schools unsafe places for parents and children.

This action is especially egregious given the **World Health Organization** is of the opinion that children who are in attendance at school on vaccination days are *“implied to have given consent”* to being vaccinated. Not informing parents of scheduled school vaccine

¹¹<https://www2.gov.bc.ca/assets/gov/health/forms/2369fil.pdf>

clinics is a clear violation of the ethical and legal right to informed consent and violates parents' Charter rights to determine what is best for their children.

Vaccinating children without the knowledge or consent of parents is both dangerous and unethical in that vaccine providers in schools do not have full knowledge of the medical histories of the children and their families. For some children, a vaccination given when medically contra-indicated can result in serious injury or death of that child. Add to this concern is the fact that neither the vaccine manufacturers nor the medical professionals administering the vaccines are legally or financially liable when vaccine injury and death occurs. Vaccines should only be given by qualified professionals who know the medical history of the individual and the family.

Threats and Coercion

We are also aware that students whose families have chosen to decline one or more vaccines are being **threatened and coerced** by school personnel including principals and teachers, as well as by public health nurses. Serious incidents of bullying and shaming have been reported by BC parents. Some teachers are reported to have made statements in their classrooms including the notions that children who are not fully vaccinated have *"parents who do not love them,"* that students *"must be vaccinated to get jobs,"* and that *"friends and classmates could die if everyone is not vaccinated"*. Vaccine providers in school vaccination clinics have been reported to use fear mongering, threats, segregation and other means of coercion and intimidation in their goal of achieving vaccination compliance.

It is the position of Vaccine Choice Canada that it is **dangerous and unethical** to hold school-based vaccination clinics and that the Mature Minor Doctrine should not apply to vaccination for the following reasons:

- a) Pre-screening to identify individuals who may be at increased susceptibility to vaccine injury and death **does not occur in Canada.**
- b) The medical industry has invested inadequate effort to identify those individuals who may have **increased susceptibility** to vaccine injury or death.
- c) Policies to administer vaccines to underage children in schools without the knowledge or consent of the parents have **inadequate safety protocols** to fully consider the personal and family medical history prior to vaccination.
- d) This failure to fully consider personal and family medical history puts these youth at **increased risk of vaccine injury.**

It is important to recognize that the school setting **is not a safe and appropriate place** for medical procedures to be conducted. We ask you to reach out to the Premier, the Minister of Health and the Minister of Education to end this very serious and potentially life-threatening practice.

Take Action

We invite School Superintendents, Trustees, Principals and Teachers to Consider these actions:

1. Become **vaccine educated**.
2. Demand **scientifically-based evidence** of all claims of safety, effectiveness and necessity.
3. Be an **advocate** for public education for all children.
4. **Decline to host vaccination clinics** in school settings.
5. Instruct students on their **right to informed consent**. Include the *Universal Declaration of Human Rights*, the *Nuremberg Code* and the provincial health act in their curriculum.
6. Provide students with **vaccine product monographs**. Teach students how to read and understand this information and how to evaluate risk vs benefit.
7. Encourage students to **question**. Teach students how to recognize '*manufactured consent*'.
8. Recommit to **humanitarian principles** including informed consent, security of the person and bodily sovereignty.
9. Take a firm stance against **censorship and coercion**. Create a forum where vaccine safety, effectiveness and necessity can be discussed and debated respectfully.
10. Commit to making schools **safe places** for families exercising their legal and moral right to informed consent.
