

# The Evidence Does Not Support Masking

In a review of the scientific evidence relevant to masking, researcher Denis Rancourt, PhD, concluded:

*"No randomized controlled trial study with verified outcome ... exists that shows a benefit from a broad policy to wear masks in public."*

In two separate Ontario rulings, arbitrators struck down the forced masking of nurses. The arbitrators concluded that the evidence presented to prove that masks are effective against transmission, was *"insufficient, inadequate and completely unpersuasive."*

Statement from the WHO's June 5th, 2020 Guidelines on Masking:

*"The widespread use of masks by healthy people in the community setting is not yet supported by high quality or direct scientific evidence ... the use of a mask alone is insufficient to provide an adequate level of protection."*
