The Evidence Does Not Support Masking

In a review of the scientific evidence relevant to masking, researcher Denis Rancourt, PhD, concluded:
“No randomized controlled trial study with verified outcome ... exists that shows a benefit from a broad policy to wear masks in public.”

In two separate Ontario rulings, arbitrators struck down the forced masking of nurses. The arbitrators concluded that the evidence presented to prove that masks are effective against transmission, was "insufficient, inadequate and completely unpersuasive."

Statement from the WHO’s June 5th, 2020 Guidelines on Masking:
“The widespread use of masks by healthy people in the community setting is not yet supported by high quality or direct scientific evidence ... the use of a mask alone is insufficient to provide an adequate level of protection.”

Forced Masking Violates our Charter Rights and Freedoms
