

A woman with her hair in a bun, wearing a grey long-sleeved shirt and a yellow baby carrier, is seen from the back, looking out over a vast mountain landscape. The landscape features rolling hills, a river valley, and distant mountains under a blue sky with scattered white clouds. In the bottom right corner of the image, there is a logo for 'VACCINE CHOICE CANADA' featuring a stylized red and yellow maple leaf.

**protecting**

## **A Quiz for Legislators**

**How Well Do You Know Your  
Vaccine Facts?**

**[VaccineChoiceCanada.com](http://VaccineChoiceCanada.com)**

## How Well Do You Know Your Vaccine Facts?

A number of provincial governments in Canada have legislation or are considering legislation that will eliminate our right to informed consent pertaining to the medical decision of vaccination. Is your representative well enough informed to legislate on this critical matter? The following quiz is designed to test the knowledge of legislators pertaining to vaccine safety, effectiveness and necessity.

# A Quiz for Legislators

✓ Check one:

<p>1. How many vaccines on Canada's Provincial childhood vaccination schedules were tested for safety using the safety protocols required for all other pharmaceutical products?</p> <p><input type="checkbox"/> All of them      <input type="checkbox"/> Most of them      <input type="checkbox"/> Some of them      <input type="checkbox"/> None of them</p>
<p>2. What is the average length of pre-licensure safety testing of childhood vaccines?</p> <p><input type="checkbox"/> Ten years      <input type="checkbox"/> Five years      <input type="checkbox"/> One year      <input type="checkbox"/> Five days</p>
<p>3. What percentage of vaccine adverse events are reported?</p> <p><input type="checkbox"/> 95%      <input type="checkbox"/> 75%      <input type="checkbox"/> 25%      <input type="checkbox"/> 1%</p>
<p>4. All G20 Nations have a vaccine injury compensation program excepting Canada and Russia.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>5. Vaccines provide lifetime immunity.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>6. All vaccines prevent infection and transmission.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>7. Vaccines are the public health measure responsible for the significant decline in mortality in the last century.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>8. What is the safe level of mercury in drinking water in Canada (in parts per billion)? What is the amount of mercury contained in multi-dose vials of the influenza vaccine?</p> <p><i>Accepted safe level of mercury in drinking water in Canada:</i>      <i>Amount of mercury in multi-dose vials of the influenza vaccine:</i></p> <p><input type="checkbox"/> 50,000 ppb      <input type="checkbox"/> 1,000 ppb      <input type="checkbox"/> 50,000 ppb      <input type="checkbox"/> 1,000 ppb</p> <p><input type="checkbox"/> 25,000 ppb      <input type="checkbox"/> 1 ppb      <input type="checkbox"/> 25,000 ppb      <input type="checkbox"/> 1 ppb</p>
<p>9. Vaccinating pregnant women has been proven safe using clinical trials.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>10. The health of Canadian children is improving.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>11. Vaccines can cause brain inflammation resulting in autism.</p> <p><input type="checkbox"/> True      <input type="checkbox"/> False</p>
<p>12. What was the rate of autism prior to 1970?</p> <p><input type="checkbox"/> 1 in 100      <input type="checkbox"/> 1 in 10,000</p> <p><input type="checkbox"/> 1 in 1,000      <input type="checkbox"/> 1 in 100,000</p>
<p>13. Which is a greater health concern in Canada today - measles or autism?</p> <p><input type="checkbox"/> measles      <input type="checkbox"/> autism</p>

# A Quiz for Legislators

14. What is the projected lifetime cost to support an individual with autism and an intellectual disability?	
<input type="checkbox"/> \$100,000	<input type="checkbox"/> \$3,000,000
<input type="checkbox"/> \$1,000,000	<input type="checkbox"/> \$5,000,000
15. Is there a difference between ingested aluminum and injected aluminum?	
<input type="checkbox"/> Yes	<input type="checkbox"/> No
16. How many childhood vaccines contain aluminum?	
<input type="checkbox"/> All of them	<input type="checkbox"/> 6 vaccines
<input type="checkbox"/> 3 vaccines	<input type="checkbox"/> None of them
17. Some vaccines are manufactured using aborted fetal cells.	
<input type="checkbox"/> True	<input type="checkbox"/> False
18. Name five ingredients commonly found in vaccines.	
1)	4)
2)	5)
3)	
19. Which of these animal parts are used in vaccine production?	
<input type="checkbox"/> rabbit brain tissue	<input type="checkbox"/> calf serum
<input type="checkbox"/> dog kidney tissue	<input type="checkbox"/> pig blood
<input type="checkbox"/> monkey kidney tissue	<input type="checkbox"/> horse blood
<input type="checkbox"/> chicken or duck egg protein	<input type="checkbox"/> all of these
<input type="checkbox"/> chick embryo	<input type="checkbox"/> none of these
20. How many vaccines and vaccine doses can a child receive to age 18 if they follow the recommended vaccine schedule?	
<input type="checkbox"/> 22 doses of 7 vaccines	<input type="checkbox"/> 40 doses of 12 vaccines
<input type="checkbox"/> 35 does of 10 vaccines	<input type="checkbox"/> 70 doses of 20 vaccines
21. What is the youngest age a minor is considered 'mature' in Canada and permitted to make medical decisions without the knowledge or consent of his or her parents?	
<input type="checkbox"/> 18 years	<input type="checkbox"/> 15 years
<input type="checkbox"/> 12 years	<input type="checkbox"/> 9 years
22. All childhood vaccines in Canada are voluntary.	
<input type="checkbox"/> True	<input type="checkbox"/> False

*“When you are studying any matter, or considering any philosophy, ask yourself only what are the facts and what is the truth that the facts bear out.*

*Never let yourself be diverted either by what you wish to believe, or by what you think would have beneficent social effects if it were believed. But look only, and solely, at what are the facts.”*

- Bertrand Russell

## ANSWERS

### How Well Do You Know Your Vaccine Facts?

**1. How many vaccines on Canada's Provincial childhood vaccination schedules were tested for safety using the safety protocols required for all other pharmaceutical products?**

None. Unlike all other pharmaceutical products, childhood vaccines are not required to undergo long-term, double blind, placebo-controlled studies to assess safety.<sup>1</sup> Safety trials conducted without a neutral placebo are unable to determine if a product is safe.

**2. What is the average length of pre-licensure safety testing of childhood vaccines?**

The length of pre-licensure safety testing of vaccines on the childhood schedule is 3 – 42 days, with the average length of testing at 5 days.<sup>2 3</sup> These safety trials only consider short-term reactions and are not designed to determine whether vaccines contribute to the development of long-term neurological disorders, autoimmune diseases, cancers, or other chronic illnesses. Whereas, the length of pre-licensure safety testing of pharmaceutical drugs is typically 5 – 10 years.

**3. What percentage of vaccine adverse events are reported?**

A study conducted for the Center for Disease Control by Harvard Pilgrim Hospital in the US concluded that fewer than 1% of vaccine adverse events are reported.<sup>4</sup> The study also found that 2.6% of vaccinations resulted in injuries—a ratio of one for every 39 vaccines administered.<sup>5</sup>

**4. All G20 Nations have a vaccine injury compensation program excepting Canada and Russia.**

True. Canada and Russia are the outliers in failing to compensate for vaccine injury. In Canada, only the province of Quebec compensates for vaccine injury and death.

**5. Vaccines provide lifetime immunity.**

False. None of the vaccine products licensed for use in Canada provide lifetime immunity. Up to 10% of individuals are non-responders to vaccination and receive no immunity from vaccines. This is considered primary vaccine failure. The immunity offered by vaccines wanes over time. This is considered secondary vaccine failure. The immunity offered by vaccines is “partial, temporary and incomplete.”<sup>6</sup> Many outbreaks are due to vaccine failure rather than a failure to vaccinate.

**6. All vaccines prevent infection and transmission.**

False. Not all vaccines are designed to prevent infection or transmission. Many vaccines are only intended to reduce the severity of symptoms should an infection occur. These include - Polio, Diphtheria, Influenza, Pertussis and Tetanus vaccines. Therefore, not being vaccinated for these infections does not alter the safety of public spaces.<sup>7</sup> Nor can these vaccines be considered to provide ‘immunity’.

5 <https://childrenshealthdefense.org/news/vaccine-injuries-ratio-one-for-every-39-vaccines-administered/>

6 Vaccines: A Reappraisal. Richard Moskowitz, MD. Skyhorse Publishing, 2017. P. 193.

7 <https://vaccinechoicecanada.com/about-vaccines/general-issues/herd-immunity/herd-immunity-can-mass-vaccination-achieve-it/>

**7. Vaccines are the public health measure responsible for the significant decline in mortality in the last century.**

False. Up to 99% of the decline in mortality in the last century occurred prior to the introduction of specific vaccines. Clean water, closed sanitation, improved hygiene, reduced exposure to toxins, clean air, better housing, breastfeeding, good nutrition and quarantine are recognized as the public health measures that were responsible for the decline in mortality.<sup>8</sup> Medical interventions, including vaccines, are recognized as contributing only 1 – 3 percent to the decline.

**8. What is the safe level of mercury in drinking water in Canada? What is the amount of mercury contained in multi-dose vials of the influenza vaccine?**

The safe level of mercury in drinking water in Canada is one part per billion (1 ppb).<sup>9</sup> The EPA in the US classifies a level of mercury above 200 ppb as toxic waste. The level of mercury in the childhood influenza vaccine (multi-dose vial) is 25,000 ppb and 50,000 ppb in the adult influenza vaccine.<sup>10</sup> Mercury is ranked third for toxicity by the US Government Agency for Toxic Substances.<sup>11</sup>

**9. Vaccinating pregnant women has been proven safe using clinical trials.**

False. The CDC began recommending the influenza and DTaP vaccines to pregnant women despite no randomized, placebo-controlled clinical trials to determine whether this is safe. A 2019 Freedom of Information request which sought the clinical trials relied upon by the FDA prior to approving any currently licensed influenza or Tdap vaccine for use in pregnant women revealed the FDA has *“no records of such clinical trials.”*<sup>12</sup> The CDC’s own researchers have found an association between vaccination of pregnant women and a significantly increased risk of miscarriage.

**10. The health of Canadian children is improving.**

False. Disorders such as autism, attention deficit hyperactivity disorder (ADHD), learning disabilities, life threatening allergies, juvenile diabetes, childhood cancers and autoimmune diseases such as arthritis are increasing at a dramatic rate. Today, one in ten children in Canada have a life-threatening affliction.<sup>13</sup> The 2018 *Raising Canada* report conducted by the O’Brien Institute for Public Health concluded that *“there is a failing state of children’s health today.”*<sup>14</sup>

**11. Vaccines can cause brain inflammation resulting in autism.**

True. The vaccine injury compensation program (VICP) in the US has awarded compensation to many individuals on the basis that vaccines contributed to or caused autism.<sup>15</sup> The government’s primary autism expert in Vaccine Court, Dr. Andrew Zimmerman, provided an affidavit affirming that vaccines can cause autism in some children.<sup>16 17</sup> A recent Freedom of Information request revealed that the CDC was unable to provide a single study to support their claim that vaccines given in the first six months of life do not cause autism.<sup>18</sup>

**12. What was the rate of autism prior to 1970?**

Prior to 1970 autism was extremely rare with a rate of less than one in 10,000. The rate of autism in Canada today is one child in 66. The rate of autism is increasing at a rate not possible with genetic causation. An environmental factor is clearly indicated.

18 <https://www.icandecide.org/wp-content/uploads/2020/03/ICAN-VS-CDC-LAWSUIT-PR.pdf>

**13. Which is a greater health concern in Canada today - measles or autism?**

Autism. According to Health Canada, approximately one child in 66 and one in 42 boys is diagnosed with an autism spectrum disorder.<sup>19</sup> This rate continues to increase. At the current rate of growth, autism is projected to affect one in two children by 2032. In comparison, there was a total of 113 cases of measles in Canada in 2019 with no deaths or permanent injury reported.<sup>20</sup> No children under 15 years old have died from measles in Canada during the last 10 years, whether vaccinated or unvaccinated.

**14. What is the projected lifetime cost to support an individual with autism and an intellectual disability?**

The estimated lifetime cost to support an individual with autism and an intellectual disability is \$2.4 M US (\$3.14 M CA).<sup>21</sup> Researchers estimate that by the year 2025 the annual cost to care for individuals with autism in the United States will exceed \$461 billion per year.<sup>22</sup> In the UK, the cost to support individuals with autism is greater than that of cancer, heart disease and stroke combined.

**15. Is there a difference between ingested aluminum and injected aluminum?**

Yes. Almost 100% of ingested aluminum is excreted from the body and is therefore considered harmless, whereas almost all of injected aluminum remains in the body and accumulates over time. Researchers have discovered that the aluminum in vaccines can cross the blood-brain barrier and be transported into the brain where it causes ongoing chronic brain inflammation. There is irrefutable scientific evidence that continuous and repeated immune system provocation with aluminum can seriously disrupt the normal course of brain development.<sup>23</sup>

**16. How many childhood vaccines contain aluminum?**

Aluminum adjuvants are used in at least six vaccines - Hepatitis A & B, Diphtheria-Tetanus containing vaccines, Haemophilus Influenza Type B, Pneumococcal and HPV.<sup>24</sup> A child in Canada receiving all government recommended vaccines can be injected with over 7,000 micrograms of aluminum in the first few years of life.<sup>25</sup> This is recognized as an acute exposure to aluminum.

**17. Some vaccines are manufactured using aborted fetal cells.**

True. The following live virus vaccines are grown in cell strains derived from aborted human fetuses – Rubella (MMRV), Varicella (chicken pox), Zoster (shingles), and Hep A & B. This is identified on the product information insert as WI-38 and MRC-5. WI-38 are cells from the lung tissue of an aborted girl in 1964. MRC-5 is cell strains from a 14-week male aborted in 1966.<sup>26</sup>

**18. Name five ingredients commonly found in vaccines.**

Vaccines contain neurotoxins, including mercury and aluminum, chemically altered viruses, antibiotics, preservatives, detergents, stabilizers, neutralizers, carrying agents, Polysorbate 80, MSG, formaldehyde, glyphosate, genetically modified viruses, human and animal DNA/RNA, and other ingredients.<sup>27</sup> These ingredients can counteract and/or bond synergistically thereby increasing their potential impact. The consequences of this interaction are unknown.

**19. Which of these animal parts are used in vaccine production?**

All of them. The medium in which vaccine bacteria and viruses are cultivated include - rabbit brain tissue, dog kidney tissue, monkey kidney tissue, chicken or duck egg protein, chick embryo, calf serum and pig and horse blood. The animal DNA/RNA and viruses cannot be fully screened out during the manufacturing process.<sup>28</sup> The injection of animal DNA/RNA compromises the biological integrity of the human race. The long-term impact of this is unknown.

28 <https://vaccinechoicecanada.com/about-vaccines/vaccine-ingredients/>

**20. How many vaccines and how many vaccine doses can a child in Canada receive if they follow the recommended vaccine schedule?**

A child in Canada can receive as many as 73 doses of 20 different vaccines by age 18.<sup>29</sup> The recommended vaccine schedule varies by province.

**21. What is the youngest age a minor is considered 'mature' in Canada and permitted to make medical decisions without the knowledge or consent of his or her parents?**

Children as young as nine years of age are being permitted to make vaccination decisions without the knowledge or consent of their parents. In many provinces there is no specified age of consent. Public health officials are using the mature minor doctrine to undermine parental authority and wishes.

**22. All childhood vaccines are voluntary in Canada.**

True. Only two provinces, Ontario and New Brunswick, require the filing of an exemption if abstaining from one or more of the recommended childhood vaccines. Health Canada has clearly stated that vaccines are voluntary and cannot be made mandatory due to our Charter of Rights and Freedoms.

*"We know that parents who vaccinate their children sincerely believe they are protecting their child from harm. They believe vaccines will provide a type of health insurance, shielding their child from disease.*

*At Vaccine Choice Canada we think it is important that we push beyond using "belief" as the basis for the vaccine decision, and instead decide from a place of information based on quality scientific evidence."*

- Edda West, Co-founder  
Vaccine Choice Canada

*"The absence of real scientific evidence of vaccine safety and effectiveness leads informed parents to conclude the vaccination paradigm is ideology rather than evidence-based medicine and more akin to religion than science.*

*Parents whose children have been harmed are no longer accepting the vaccine ideology on faith. Their trust has been broken."*

- Ted Kuntz, President  
Vaccine Choice Canada
